Abstract

This document presents various rankings of publication output of scholars in the field of business studies. The rankings are based on the ABDC Journal Quality List, the CABS Academic Journal Guide, the ERIM Journal List, the list of the Handelsblatt BWL Ranking, the Hcéres liste des revues, Scimago Journal Ranks, and the VHB Jourqual 3 list. Different metrics are used to account for different ways to assess co-authored publications.

Introduction

The academic career of scientists is ever more depending on publishing success. Tenure, promotion, and hiring decisions often rely on publication metrics aiming at quantifying the productivity of individuals. Sometimes these decisions are the result of policies which are explicitly based on publication metrics, such as the number of articles published in highly rated journals. In other cases, publication metrics implicitly bias the evaluation of committee members and reviewers. Similarly, when applying for research funds, researchers have to be aware that they are, to some extent, evaluated on metrics.

Naturally, many researchers adapt their publication strategy to those metrics which are believed to be used when being evaluated. This influence of metrics on the behaviour of researchers is usually not intended and probably harmful for science in general. Nevertheless, young researchers, in particular, cannot take the risk of not complying with the norms induced by the metrics used.

One might argue that metrics should not be used when assessing individuals because a scientist's career can not be summarized by a number. However, their use can also "reassure young researchers that the institution is not perpetuating an old-boys' network, in which personal connections are valued over actual achievement" [1]. Therefore, abolishing publication metrics altogether can have its own negative effects.

Whether an actual achievement is actually recognized may vary substantially depending on the evaluation criteria. A researcher who may be performing excellently according to some metric, may only have average or even poor performance according to other metrics and vice versa. In order to eliminate the inherent bias by any particular metric, this document presents multiple rankings based on various journal lists in the field of business studies. The rankings are based on a customizable online tool *P-Rank* [6] allowing users to select among multiple different journal lists and evaluation criteria that fit to their publication strategy.

Although fundamental problems of assessing research performance cannot be resolved in general, the various rankings presented in this document aim at providing a more holistic overview over publishing performance subject to different evaluation criteria. In particular, the different rankings should help in quantifying achievements according to various criteria, rather than pushing authors to adapt their publication strategy to any particular metric.

Methodology

The rankings presented in this document are produced using publication data published by the authors on ORCID [9]. All publications receive a score based on the presumed journal quality according to a particular journal list. A ranking is then created by comparing the total points of each author, which are determined by summing up all publication scores and adjusting for the number of co-authors.

Top 1000 contributors In this ranking, each author receives the journal score divided by the number of (co-)authors for each publication. This ranking considers that the relative contribution of an author to a publication can be expected to differ between publications with only a few number of authors and such with many co-authors.

Top 1000 collaborators In this ranking, each author receives the full journal score for each publication. This ranking is independent of the number of (co-)authors and favours authors who intensively collaborate with others.

Top 250 individuals In this ranking, each author receives the full journal score for each single-authored publication. This ranking penalises authors who mainly collaborate and favours authors who publish individual research.

The different rankings are generated based on the following journal lists and weighting schemes:

ABDC Journal Quality List This list is proposed by the Australian Business Deans Council [2] and uses the following scores.

ABDC Category	Score
A*	1
A	0.5
B	0.25
C	0.1

Journals without ISSN have been removed from the list.

CABS Academic Journal Guide This list is proposed by the Chartered Association of Business Schools [3] and uses the following scores.

CABS Category	Score
4*	1
4	0.5
3	0.25
2	0.1
1	0.05

ERIM Journal List This list is proposed by the Erasmus Research Institute of Management [4] and uses the following scores.

EJL Category	Score
STAR	6
P	3
M-STAR	3
S	1
PA	1

Handelsblatt This list has been used in the Handelsblatt BWL Ranking 2014 and uses the scores proposed by [7]. Non-English journals and proceedings have been removed from the list.

HCERES This list is proposed by the Haut Conseil de l'évaluation de la recherche et de l'enseignement supérieur [8] and uses the following scores.

HCERES Category	Score
A	6
B	3
C	1

Scimago Journal Ranks This list uses modified 2018 Scimago Journal Ranks as proposed by [10]. Non-English journals have been removed from the list.

VHB Jourqual 3 This list is proposed by the Verband der Hochschullehrer für Betriebswirtschaft [11] and uses the following scores.

VHB Category	Score
A*	1
A	0.5
B	0.25
C	0.1
D	0.05
k.R.	0.025

Non-English journals and proceedings have been removed from the list.

Changes compared to previous editions

The methodology is the same as for P-Rank 2020 [5]. However, the number of authors in the database grew by approximately 30 per cent to around 8000 authors around the world.
